

Title of the CMC 2026 Paper (Title in 14-point Bold, Capitalized in Titlecase)

Anonymous submission

Abstract

Each paper must include an abstract of up to 150 words in 9 pt with interlinear spacing of 10 pt. The heading should be centered, 10 pt bold.

Keywords: keyword1, keyword2, keyword3

1. Paper and Abstract Submission

CMC-Corpora 2026 has short papers and abstracts featuring substantial, original, and unpublished research in all aspects of CMC corpora and their evaluation, including spoken and multimodal interaction. Submissions are invited in four broad categories: (i) creation and development of CMC corpora, (ii) analysis of CMC corpora (iii) NLP evaluation of CMC data, and (iv) topics of general interest. Submissions that span multiple categories are particularly welcome.

Submissions may be of two types:

- Short papers - from three (3) to five (5) pages,¹ for conference presentation as a 20-minute talk.
- Abstracts - up to 300 words, for conference presentation as a poster.

Upon acceptance, final versions of papers will be given one additional page—up to six (6) pages of content, plus unlimited pages for acknowledgments and references—so that reviewers' comments can be addressed. All figures and tables that are part of the main text must fit within these page limits.

Papers must be of original, previously-unpublished work. Papers must be **anonymized to support double-blind reviewing**. Submissions must not include authors' names and affiliations. The submissions should also avoid links to non-anonymized repositories: code should be submitted either as supplementary material in the final version of the paper or as a link to an anonymized repository (e.g., Anonymous GitHub or Anonym Share). Papers that do not conform to these requirements will be rejected without review.

Please use the `[review]` setting for submissions:

```
\usepackage[review]{cmc2026}
```

This hides the authors and adds page numbers.

¹Excluding any number of additional pages for references, ethical considerations, and data and code availability statements.

2. How to Produce the .pdf

In order to generate a PDF file, the following steps need to be performed:

1. `xelatex your_paper_name.tex`
2. `bibtex your_paper_name.aux`
3. `xelatex your_paper_name.tex`
4. `xelatex your_paper_name.tex`

We are using the font TeX Gyre Heros, so you must install it if you do not have it. We use TeX Gyre Cursor as a monospaced font.² To compile, you can use either **pdfLaTeX**, **XeLaTeX** or **LuaLaTeX**.

3. Final Submission

Each final paper/abstract should be submitted online. The fully justified text should be formatted according to the CMC 2026 style as indicated for paper submission. Final papers and abstracts must include authors and affiliations and exclude any line numbering.

For abstract submissions, omit Sections 1–12 of this document (i.e., the submission should contain the title, the abstract, the keywords, and the references).

For paper submissions, length should be up to 5 pages, including figures (plus additional pages if needed for references, ethical considerations, conflict-of-interest statements, as well as data and code availability statements).

- The paper is in A4-size format, that is 21 x 29.7 cm.
- The text height is 24.7 cm and the text width 16.0 cm in two columns separated by a 0.6 cm space.

²They are available from CTAN in the [tex-gyre-heros](#) and [tex-gyre-cursor](#) packages or in TeXLive as `tex-gyre` and `tex-cursor`.

- The font for the entire paper should be TeX Gyre Heros, a sans-serif font based on Helvetica, with TeX Gyre Cursor for the monospaced font.
- The main text should be 10 pt with an interlinear spacing of 11 pt.
- The use of `cmc2026.sty` will ensure the good formatting.

4. Page Numbering

Please do not include page numbers in your article. The Organizing Committee will insert the definitive page numbering of articles published in the proceedings. Review submissions use page numbers (added automatically by the `[review]` option); the final camera-ready version must not include page numbers.

5. Headings / Level 1 Headings

Level 1 Headings should be capitalized in the same way as the main title and centered within the column. The font used is 12 pt bold. There should also be a space of 12 pt between the title and the preceding section, and 3 pt between the title and the following text.

5.1. Level 2 Headings

The format of Level 2 Headings is the same as that for Level 1 Headings, with the font at 11 pt, and the heading justified to the left of the column. There should also be a space of 6 pt between the title and the preceding section, and 3 pt between the title and the following text.

5.1.1. Level 3 Headings

The format of Level 3 Headings is the same as that of Level 2 headings, except that the font is 10 pt. There should also be a space of 6 pt between the title and the preceding section and 3 pt between the title and the following text.

6. Citing References in the Text

6.1. Bibliographical References

Table 1 shows the syntax supported by the style files. We encourage you to use the natbib styles. You can use the command `\citete` (cite in text) to get “author (year)” citations, like this citation to a paper by Chomsky (1973). You can use the command `\citep` (cite in parentheses) to get “(author, year)” citations (Chomsky, 1973). You can use the command `\citealp` (alternative cite without

Output	natbib command	Old command
(Eco, 1990)	<code>\citep</code>	<code>\cite</code>
Eco, 1990	<code>\citealp</code>	no equivalent
Eco (1990)	<code>\citete</code>	<code>\newcite</code>
(1990)	<code>\citeyearpar</code>	<code>\shortcite</code>

Table 1: Citation commands supported by the style file. The style is based on the natbib package and supports all natbib citation commands. It also supports commands defined in previous style files for compatibility.

parentheses) to get “author, year” citations, which is useful for using citations within parentheses (e.g. Chomsky, 1973).

When several authors are cited, references should be separated with a semicolon: (Chomsky, 1973; Strötgen and Gertz, 2012). When the reference has more than three authors, only cite the name of the first author followed by “et. al.”, e.g. Eisenstein et al. (2014).

7. Figures & Tables

7.1. Figures

All figures should be centered and clearly distinguishable. They should never be drawn by hand, and the lines must be dark in order to ensure a high-quality printed version. Figures should be numbered in the text and have a caption in 10 pt underneath. A space must be left between each figure and its respective caption.

Example of a figure:

Figure 1: The caption of the figure.

Figure and caption should always appear together on the same page. Large figures can be centered, using a full page.

7.2. Tables

The instructions for tables are the same as for figures.

Level	Tools
Morphology	Pitrat Analyser
Syntax	LFG Analyser (C-Structure)
Semantics	LFG F-Structures + Sowa's Conceptual Graphs

Table 2: The caption of the table

8. Footnotes

Footnotes are indicated within the text by a number in superscript.³

9. Copyrights

The CMC-Corpora Proceedings will be published by the CMC-Corpora Conference organizers. They will be available online from the conference website.

CMC-Corpora's policy is to assert copyright for all CMC contributions. In assigning your copyright, you are not forfeiting your right to use your contribution elsewhere. This you may do without seeking permission and is subject only to normal acknowledgment to the CMC-Corpora Proceedings. The CMC-Corpora Proceedings will be licensed under CC-BY-NC, the Creative Commons Attribution-Non-Commercial 4.0 International License.

Your submission of a finalized contribution for inclusion in the CMC-Corpora Proceedings automatically assigns the above copyright to CMC-Corpora.

10. Acknowledgments

For the final, accepted version of your paper, place all acknowledgments (including those concerning research grants and funding) in a separate section at the end of the paper.

11. Optional Supplementary Materials

Links to appendices or supplementary material (software and data) will be allowed ONLY in the final, camera-ready version, but not during submission, as papers should be reviewed without the need to refer to any supplementary materials.

We encourage the submission of links to supplementary materials to improve the reproducibility of results and to enable authors to provide additional information that does not fit in the paper. For example, preprocessing decisions, model parameters, feature templates, lengthy proofs or derivations, pseudocode, sample system inputs/outputs, and

other details necessary for the exact replication of the work described in the paper can be provided as linked materials. However, the paper submissions must remain fully self-contained, as these supplementary materials are optional, and reviewers are not asked to review or download them. If code or model specifications are an essential part of the contribution, or if they are important for the reviewers to assess the technical correctness of the work, they should be a part of the main paper and not be linked supplementary materials.

11.1. Appendices

Appendices are material that can be read and include lemmas, formulas, proofs, and tables that are not critical to the reading and understanding of the paper, as in [*ACL PUB](#). It is highly recommended that the appendices should come after the references; the main text and appendices should be contained in a 'single' manuscript file, without being separately maintained. If you use appendices, letter them in sequence and provide an informative title: *Appendix A. Title of Appendix*

12. Providing References

12.1. Bibliographical References

Bibliographical references should be listed in alphabetical order at the end of the paper. The title of the section, "Bibliographical References", should be a Level 1 Heading. The first line of each bibliographical reference should be justified to the left of the column, and the rest of the entry should be indented by 0.35 cm.

The examples provided in Section 13 illustrate the basic format required for papers in conference proceedings, books, journal articles, and book chapters.

13. Bibliographical References

Noam Chomsky. 1973. Conditions on transformations. In Stephen R. Anderson and Paul Kiparsky, editors, *A festschrift for Morris Halle*, pages 232–286. New York: Holt, Rinehart & Winston.

Umberto Eco. 1990. *The limits of interpretation*. Bloomington: Indiana University Press.

Jacob Eisenstein, Brendan O'Connor, Noah A. Smith, and Eric P. Xing. 2014. [Diffusion of lexical change in social Media](#). *PLoS ONE*, 9(11):e113114.

³Footnotes should be in 9 pt, and appear at the bottom of the same page as their corresponding number. Footnotes should also be separated from the rest of the text by a 5 cm long horizontal line.

Jannik Strötgen and Michael Gertz. 2012. Temporal tagging on different domains: Challenges, strategies, and gold standards. In *Proceedings of the Eight International Conference on Language Resources and Evaluation (LREC'12)*, pages 3746–3753, Istanbul, Turkey. European Language Resource Association (ELRA).
