

### Problema 1

This problem has several parts:

- (a) The first part.
- (b) The second part.
- (c) The third part.

### Problema 2

For each of the following below, determine which option is correct.

- |      |                    |                      |                      |                          |
|------|--------------------|----------------------|----------------------|--------------------------|
| (i)  | a) $2 \cdot 2 = 4$ | b) $x^3 = x \cdot x$ | c) $\sin x = \cos x$ | d) $\sin x^2 = \sin^2 x$ |
| (ii) | a) $2 \cdot 2 = 4$ | b) $x^3 = x \cdot x$ | c) $\sin x = \cos x$ | d) $\sin x^2 = \sin^2 x$ |

### Problema 3

Compute the following integral:

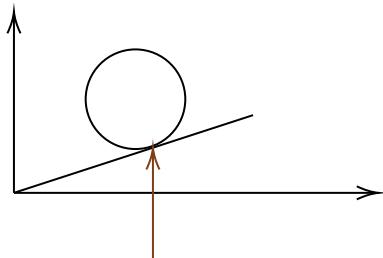

$$\int e^{-x^2} dx$$

Referencias ecuaciones se vuelve más sencillo al usar el comando

`\ref{eqn:Nombre de la etiqueta}`

Tal como se muestra aquí, [1] en [2]:

$$\begin{aligned} x + y &= \frac{2x}{y} \\ y(x + y) &= 2x \\ xy + y^2 &= 2x \end{aligned}$$

Otra forma de poder ubicar varios balances puede ser usando tablas.

**Balance momentos**

$$\begin{aligned}x + y &= \frac{2x}{y} \\y(x + y) &= 2x \\xy + y^2 &= 2x\end{aligned}\quad (1)$$

**Balance fuerza x**

$$\begin{aligned}x + y &= \frac{2x}{y} \\y(x + y) &= 2x \\xy + y^2 &= 2x\end{aligned}\quad (2)\quad (3)\quad (4)$$

**Balance fuerza y**

$$\begin{aligned}x + y &= \frac{2x}{y} \\y(x + y) &= 2x \\xy + y^2 &= 2x\end{aligned}\quad (5)\quad (6)\quad (7)$$
